

XGBoost tree depth: cross-validation vs test-set Sharpe (production config, lr=0.05, n=500)

**Training cross-validation
(5 folds, 1990-2010)**

**Test set
(2011-2024)**

Left: CV is flat across depths, all within the ~ 0.7 across-fold std, so depth is not resolvable in sample. Right: out-of-sample Sharpe peaks at depth 4. Depth 4 (blue) is adopted.
